member having a mounting portion attached to the insulating housing. The mounting portion having arms that extend toward a circuit board and an attachment portion that extends from between the arms to engage the circuit board. The attachment portion having legs spaced from the arms. The legs being positionally shifted relative to each other so that the legs do not come into contact with each other when the attachment portion absorbs positional deviation.

2. (Amended) The moveable connector of claim 5, wherein the attachment member is integrally formed by stamping a metal plate.
3. (Amended) The moveable connector of claim 5, wherein (the mounting portion) includes a base portion having arms that extend from the base portion toward the circuit board.
4. (Amended) The moveable connector of claim 3, wherein (the attachment portion) extends further than the arms from the base portion at a point between the arms.
